

Specifications of the material

<u>PU</u> (polyurethane): it is a transparent oil resistant material and dries well also tiled floors and floors with medium-sized joints.

Antiolio (Oil-resistant): white colour with hardness which goes between 40sh and 50sh. Suitable to dry oily floors, but not with an elevated drying result and rolled concrete floor (not tiled floors).

<u>Vulkollan:</u> particular type of polyurethane; it is used mainly for the front rubber (striped). It does not have particular drying characteristics.

<u>Para 33 shore:</u> dark red colour; it is a very pure natural rubber and it has excellent drying characteristics, especially on tiled floors. Because of its softness, this rubber is not recommended on very rough floors.

Para 40 shore: brown colour; it has good drying characteristics on all types of floors and it is also resistant.

Para 50 shore: light brown colour; suitable for industrial floors with an excellent resistance.

<u>Linatex</u>: it is the commercial name of a particular type of rubber in para (natural rubber). Its colour is light red and it is suitable especially on floors with large and deep joints (such as supermarket floors).

PS: all squeegee rubbers are provided with the part number stamped, this to avoid ordering mistakes.
